MAXIMUM RELIABILITY

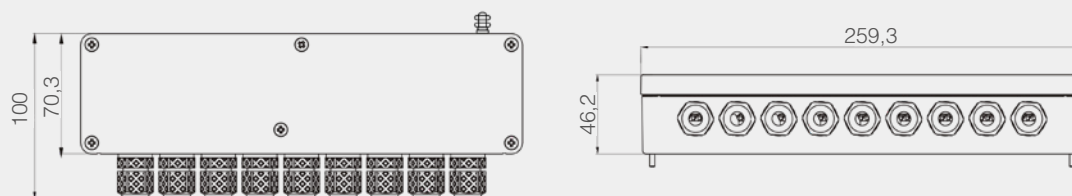

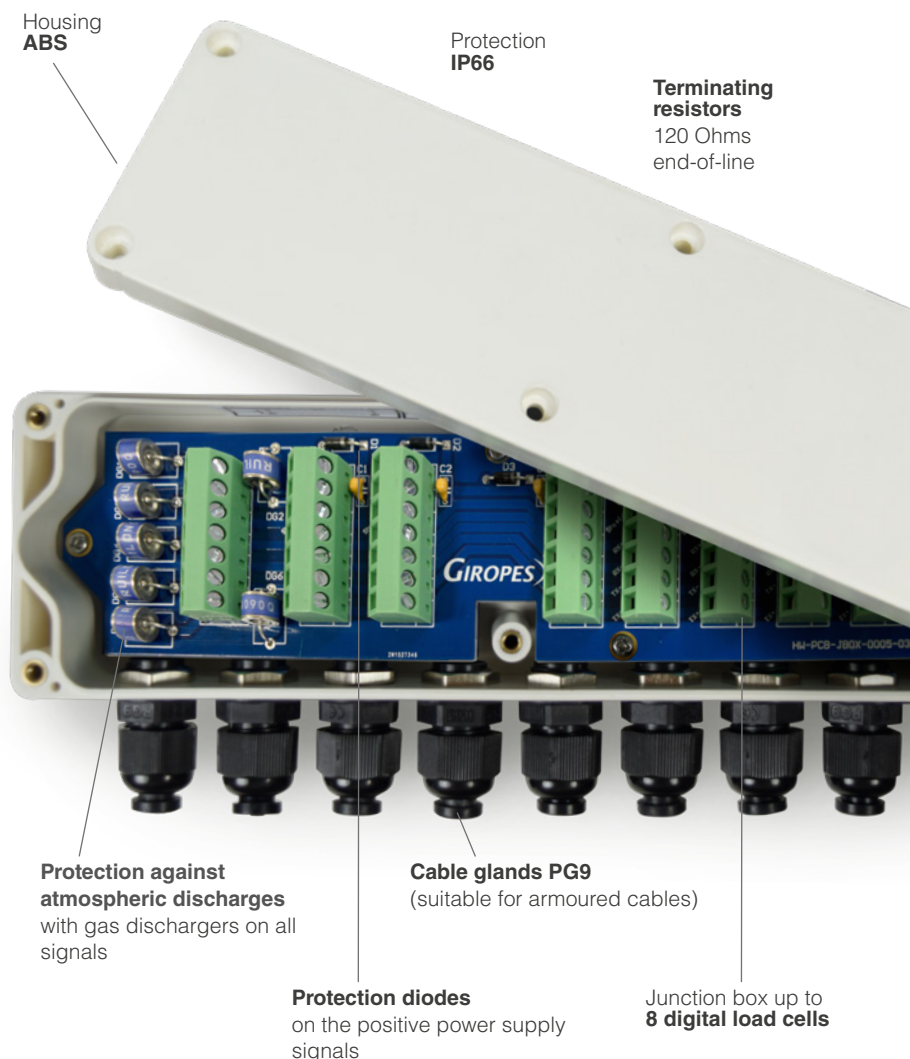

## 66 IP GBOX8 DIGITAL, DESIGN & QUALITY

The GBOX DIGITAL sum box, designed and manufactured by Giropes, enables weighing via the digital system, completing the installation through indicators GI430D or GI650D allowing greater distances to be reached between the indicator and the scale than an installation with analogue cells.

The GBOX8D operates via RS422/RS485 protocol with line terminating resistors (optional configuration)

The PG9 cable glands are suitable for armoured cables. In conjunction with the design of the enclosure, they also provide IP66 protection.

Dimensions (mm)

Reference	Description	Packing weight (g)	Code #
GBOX DIGITAL	Giropes hermetic ABS digital junction box (8 cells)	320	240055
AC8CLGBOX	Digital junction circuits up to 8 load cells	96	240066
